

23/23

You scored **100%**

Thank you for taking the Plant Healthy self-assessment questionnaire - we hope this has been a useful exercise. Ensuring strong biosecurity measures within UK horticulture is a huge challenge and guarding against plant pests is a continual process – even if a high score was achieved!

The purpose of this report is to raise awareness of the Plant Health Management Standard. The standard aims to help you implement improved biosecurity and plant health management practices that help protect the amenity horticulture sector and wider countryside from damaging plant pests.

This report should be read in combination with the complete Plant Health Management Standard (link below). This report simply presents the requirements of the standard based on the 'No' or 'NA' answers that you provided.

This is not an official certificate and should not be used to demonstrate that your business or organisation complies with any plant health regulations or standards.

Assessment Summary

Reference #	1641136610KB
Company	Yarrow Gardens
Completed by	Yarrow Gardens
Date Completed	02/1/22 3:16pm
Total 'Yes'	23
Total 'No'	0
Total 'NA'	0
Total Score (%)	100%

What's Next?

In the summer 2019 the full plant health assurance scheme will be launched. Certification bodies will be appointed to provide independent audits to businesses / organisations. As with most independent assurance schemes there will be a cost for these audits.
